Type: Feature	**Title:** Frontpage - Blog	**Status:** ON

Context: Backend features were implemented and now the immediate concerns are parsing the available posts and conveniently adding them to the front page.

Core Decision: Implement a frontpage that has components featuring new, sortable posts

Prospects	Decision Parameters	0TD Concerns

1. Seamless filtration of data during query
2. Three layouts
  ← Card, features description
  ← Bicolumnar grid
  ← Tricolumn grid
3. Functional navbar
  ← By default, posts are sorted by recent
  ← Recency also operates off sort feature
4. Dark mode saved using cook-ieStore
		↳ Sort feature not implemented, however with queries API is not difficult
